

TECHNICAL DATA SHEET

QUALUBE ENDURASYN 10W/30

In today's high-speed, increased horsepower, severe-duty diesel engines, motor oils are stressed as never before and must serve many functions simultaneously. In addition to its primary function of lubricating moving parts to minimise friction and wear, the oil must keep the engine clean and free of rust, prevent corrosion of bearings, act as a coolant and trap contaminants to be carried in suspension until the oil is drained. Additional requirements are also being imposed by the continuing improvements in pollution control with the introduction of new engine designs.

Qualube Endurasyn 10W/30 has been developed to meet these diverse and demanding service requirements of the latest diesel engines. Qualube Endurasyn 10W/30 is formulated using modern additive technology, shear stable viscosity modifiers and a combination of synthetic and mineral base stocks.

Qualube Endurasyn 10W/30 provides:

- Longer oil drain intervals, providing lower maintenance costs
- Proven engine and piston cleanliness allowing for clean burning engines with improved fuel economy
- Improved engine durability providing reduced repair costs
- Constant protection against corrosion and rusting of engine components

Qualube Endurasyn 10W/30 is deemed to meet or exceed the following requirements although some specifications are viscosity specific:

ACEA E7-08 (2010) Issue 2	API CI-4	Daimler MB 228.3
MAN 3275	CAT ECF-2, 1-a	Volvo VDS-2
Mack EO-M Plus	Renault RD-2/RLD	Cummins CES 76/77/78

The following ACEA specifications are included as they may appear in certain operator manuals:

ACEA E7 (2007) (obsolete)	ACEA E7 (2004) (obsolete)	ACEA E5/E3/B3 (2002) (obsolete)
---------------------------	---------------------------	---------------------------------
